Inmagic® DB/Text® *WebPublisher PRO* Version 19.0 README

About DB/Text *WebPublisher PRO*

DB/Text *WebPublisher PRO* is a server version of DB/TextWorks that enables you to publish textbases on the Internet or an intranet, so Web users can search them. *WebPublisher PRO* accepts queries from standard Web browsers, such as Microsoft Internet Explorer, and accepts XML function calls. The software returns search results in dynamically generated HTML and XML reports, and allows for editing over the Web. *WebPublisher PRO* is used together with DB/TextWorks, which is the "buildware" for creating searchable textbases.

Important Notes

Important! This section applies to clients upgrading from <u>version 14.5 or earlier</u>. Please read the entire section carefully.

- Before you can use any textbase with *WebPublisher PRO* v19.0, you must upgrade the textbase using DB/TextWorks version 19.0. You will be prompted to upgrade the textbase when you open it with DB/TextWorks.
- A change must be made to the WEB.CONFIG file for InmagicBrowse. Please see the installation notes for more information.
- WebPublisher Edit Screens now use WPP_Edit.aspx instead of a .ASP page (iwpp-edit.asp or icsw-edit.asp). You will need to re-export any HTML edit screens. And if you have made any customizations to the old .ASP pages (rare), you'll need to transfer those customizations to the new .ASPX page.
- If your WebPublisher reports look different than they did in previous versions, they probably include Raw HTML or Inline Images. Open the form in the Form Designer, choose Tools>Form Properties, select the HTML tab, uncheck **Use Cascading Style Sheets to preserve formatting**, save the form, and try the report in WebPublisher again.
- Customers with *Inmagic Genie* should review the UseLegacyEncoding= option in the DB/TextWorks Help; see the "DBTWPub.INI (ICSWeb.INI) File" topic under "WebPublisher PRO Configuration" in the Help Contents.

What's New in this Version?

Additional Documentation and Help Resources

Below is a list of the documentation and help resources for WebPublisher PRO. If you cannot locate installed copies of these documents, please check the Inmagic Customer Extranet.

- **Support Matrix**. The *WebPublisher PRO Support Matrix* is available on the Inmagic Extranet. It lists requirements for installing and using the product.
- **Installation and Upgrade Notes**. *WebPublisherPROInstallAndUpgradeNotes.pdf* explains how to install and upgrade the product.
- **Online Help**. The help file installed with DB/TextWorks contains information about *WebPublisher PRO*.To open the help file, start DB/TextWorks and press **F1**, or choose **Help>Help Topics** from the DB/TextWorks menu bar.
- **Knowledgebase**. Use the Inmagic Technical Support knowledgebase on the Web to search for solutions to common problems and explanations for error messages. To access the knowledgebase, go to the Inmagic Customer Extranet.
